

HARRIER EQUITY GROWTH MODEL PORTFOLIO SERVICE

PORTFOLIO OBJECTIVE

The Equity Growth portfolio seeks long-term capital growth for investors who are willing to accept significant fluctuations in their capital value and are less concerned at the prospect of losses. All of the portfolio's assets would be invested in global equities although this may fluctuate between 85% and 100% over the investable period, typically a minimum of twelve years.

PORTFOLIO FACTS

- Emphasis on equities to drive long-term growth in real terms
- Active asset allocation to reduce portfolio volatility through the cycle
- Direct investment in global equities complemented by third-party funds
- Focus on competitively-advantaged companies with sustainable growth and high returns on investment
- Low portfolio turnover and long-term holding periods
- Emphasis on liquidity across all asset classes
- Cost-effective access to our best ideas

CURRENT POSITIONING

	Current Weight (%)	Relative to Benchmark	Reasoning
EQUITY	99.00	+	Small overweight to the strategic benchmark with a focus on a balance of high-quality assets that can navigate a range of potential economic outcomes.
CASH	1.00	—	Cash levels below neutral.

Transaction Costs	0.14%
Total Expense Ratio	0.81%

MARKET UPDATE

- European equities rose 3.4% in February taking full year returns to 10%. This compares to 1.4% for the US equity market in the month and 1.2% year to date.
- The Financial and Health Care sectors have led global markets, up 7% year to date compared to the worst performing sector, Technology, down 4% as some of the hype around AI faded.
- Much of the post-election 'Trump Bump' has now been eroded as investors weigh conflicting policies of higher import tariffs with the promise of a more business friendly government and lower taxes.
- There was a deterioration in macro data with the largest monthly decline in US consumer confidence in 4 years and the US Services PMI also falling close to contraction territory.
- Contrary to this, manufacturing improved to a level above 50 (denoting expansion over contraction) for the first time since September 2022.

- Bond yields were flat in the UK but continued to fall in the US. The Federal Reserve is now expected to carry out three quarter-point interest rate declines by the end of the year.

PORTFOLIO UPDATE

- There was no change to headline asset allocation during the month.
- The fund remains overweight equities with our equity portfolio outperforming the global index during the month and year to date. We continue to prefer a more balanced, diversified portfolio compared to how many of the major indices look.

ENTEGRIS

Entegris provides chemicals and filters used to manufacture semiconductors as well as products to move and protect silicon wafers and chemicals through the production process. The business operates at the cross-roads of materials intensity and materials purity, the two defining factors of the next generation of semiconductor performance. Simply put, as semiconductor manufacturing processes become more complex, each chip requires more of Entegris's chemicals and filtration solutions.

The company's materials drive better semiconductor performance, help enable new chip architectures and accelerate the transition to new nodes. Its components and filters improve yields by protecting critical materials during manufacturing, transport and storage while ensuring a contamination-free production environment. The business benefits from high market shares across multiple niche chemicals which are designed into the wafer manufacturing process at each node. These solutions are increasingly specified to meet customers' unique process conditions and technical roadmaps, yet also only represent a small portion of the overall cost of making a semiconductor. The ensuing high switching costs creates sticky solutions with long, profitable revenue streams.

Relative to other semiconductor suppliers, Entegris is unusual in that most of its sales are tied to products repeatedly consumed during the semiconductor manufacturing process. As a result, sales are more impacted by overall chip demand and global GDP growth rather than the sale of semiconductor capital equipment which has historically been more cyclical. The business is also more diverse than peers, with a portfolio containing tens of thousands of highly specialised lines with no single product platform representing more than 4% of revenue and a top 10 customer base representing less than half of sales.

Semiconductor volumes are expected to continue to grow at the 5-6% annual growth rate seen over the past two decades given powerful trends including artificial intelligence (AI) and cloud computing infrastructure, electrification of the car industry, renewable power and associated grid investments, factory automation and telecom network investment. In addition to this volume growth, as chips become more complex the number of steps in the manufacturing process increases. Each step requires chemicals and filtration, which in turn are becoming more sophisticated and valuable within the process. These dynamics allow Entegris to outgrow industry volume growth by 4-5%.

Leading-edge chips tied to AI aside, the broader semiconductor ecosystem has endured a more challenging period as surging post-Covid sales have given way to lacklustre demand and over-stocked inventories across auto, industrial and electronics markets – a classic semiconductor down-cycle. Entegris has only delivered modest earnings growth which accompanied with a falling valuation has led to correspondingly little share price return since 2021. With the wider semiconductor industry now showing signs of recovery we think Entegris's current valuation provides an opportunity.

Double digit sales growth should be sustainable for the next few years alongside a cycle recovery, with natural operating leverage and faster growth of the higher margin filters division driving mid-teens operating profit growth. Continued debt pay down and reducing capital intensity post a period of elevated investment should then lead to even stronger earnings and cash flow per share growth. Longer term we expect Entegris to continue to gain market share and grow at high returns given its attractive position as an 'arms-dealer' to the wider semiconductor industry.

RESPONSIBLE INVESTMENT

We believe companies that allocate capital responsibly, by putting environmental, social and governance (ESG) considerations at the centre of their strategic frameworks, are more likely to succeed in the longer term than those companies that do not.

ESG considerations form an integral part of our investment analysis across all asset classes and investment structures. We believe this helps us identify the long-term winners and avoid firms exposed to potential risks and vulnerabilities.
